## Capability Statement

### Make the invisible visible

Clarity Engine™ is a proprietary platform that turns desired outcomes into agency and business-unit action. Projects slip when high-impact risks remain hidden or unknown. Clarity Engine uncovers catastrophic risks, constraints, and external dependencies early. It standardizes change requests with preset options and delivers real-time dashboard transparency so leaders can make timely, informed decisions.

#### See Earlier

Risk heatmaps, dependency tracker, leading indicators

#### Decide Faster

Preset change-request options, approvals and SLAs (Service Level Agreements)

#### Prove Outcomes

Owners and due dates, audit trails, KPIs (Key Performance Indicators) scorecards

### Core Competencies

- Portfolio risk visibility: heatmaps, mitigation burndown, dependency mapping
- Objective-to-execution mapping: SMART (Specific, Measurable, Achievable, Relevant, Time-bound) + CLEAR+ (Collaborative, Limited, Emotional, Adaptable, Refinable + Innovation-Enabled) templates; copy-to-edit flows
- Change-request playbooks: preset options, impact analysis, approvals, and SLAs (Service Level Agreements)
- Executive dashboards: outcomes, KPIs (Key Performance Indicators), schedule/cost early-warning signals
- Data integration: schedules, cost, permits, field signals; audit-ready artifacts
- Secure multi-tenant SaaS (Software as a Service): per-company database isolation, RBAC (Role-Based Access Control) / ABAC (Attribute-Based Access Control), versioned APIs (Application Programming Interfaces)

### Where We Fit

#### Government Construction – Highways and Roads

- Catastrophic risks: safety, structural/geotechnical
- Constraints: access, lane closures, staging, materials, budget
- External dependencies: ROW (Right of Way), rail, permits, environmental windows, traffic, utilities, city coordination
- Change requests: proactive options created up front

#### Enterprise Technology – Programs and Platforms

- Catastrophic risks: outages, breaches, ransomware, identity failures
- Constraints: staffing, budget, release windows, long-lead hardware
- External dependencies: cloud, SaaS (Software as a Service) / APIs (Application Programming Interfaces), carriers/CDNs (Content Delivery Networks), auditors
- Change requests: impact analysis, approvals, canary releases/feature flags

### Why We Win with Agencies and Enterprises

- Zero-integration start: stand up an executive dashboard fast, then deepen data feeds over time
- Evidence-based delivery: change gates, rollback plans, immutable audit trails
- Per-tenant isolation by design: surgical data egress upon customer separation
- Templates prevent drift: read-only best-practice catalog with copy-to-edit workflows

## Project experience

- **Alaska Airlines** - Mergers & Acquisitions (Virgin America, Hawaiian Airlines): SOC, ATC, call-sign, FAA, and NOC integration with canonical identity mappings and gated cutovers; zero major incidents across milestones.
- **T-Mobile** - Network-as-a-Service (NaaS); Provider APIs; National Partners; UCC platform; Operations; portfolio restructuring; pilot-to-production with SLOs, throttling, and retries; resilient partner onboarding.
- **The Walt Disney Company** - Disney Streaming Services; identity management; ID graph; BI portals; data reliability engineering: 99.9% pipeline uptime, 46% MTTR reduction, and multi-million-dollar annual savings.
- **IBM** - National Consulting Team (BladeCenter & System x servers), West Region (Alaska to California): enterprise infrastructure consulting, technical training, sales closure assistance and delivery.
- **Public Sector Software** - highway/road program modules: risk heatmaps, permit/utility dependency tracking, 6-year project schedule template copy/edit ready, mitigation burndown, and executive KPIs.

## Implementation in weeks - not months

- Week 0-2: Executive dashboard live (templates + sample data)
- Week 3-6: Connect schedules, cost, and permits; configure alerts and playbooks
- Week 7-12: Portfolio roll-ups, audit bundles, and KPI scorecards

## Company snapshot

spgFix LLC (Clarity-Engine™) - Founded 2018 • HQ: Lynnwood, WA

- UEI: EEE6MR8GRMCF5 | CAGE: 10J48 | D-U-N-S: 118590852
- Socioeconomic: Small Business; Woman-Owned (51%); Minority-Owned (100%)
- NAICS: 541511, 541512, 541519, 541611

## Contact

- Lowell Sandoval - Chief Clarity Officer | Ann Tu - Founder & Chief Operations Officer
- Email: [Lowell@spgFix.com](mailto:Lowell@spgFix.com) | Office Phone: 206-887-3863 | Website: [spgFix.com](http://spgFix.com)
- Availability: Federal, state, local, and utilities - nationwide

Take 15 minutes to see it in action - highways/roads focus or tailored to your sector.
